

Blower from the portable fresh air specialist Etertub

8675

Application

- In shaft / buildings where it is not known how much oxygen is in the air, the blower extracts this air at a capacity of max. 70m³/h, so that the oxygen-saturated air can flow in. The blower can be used on site without the need for a mains supply of power as it is battery-operated.

Characteristics

- Insert the flexible suction hose in the shaft in order to extract the air already inside.
- The blower is operated with a portable battery.

Material

- PE-HD Plastic

Caution

- This equipment is shipped and invoiced directly to you from Etertub AG Bilten (excl. transport costs).
